DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 1/18/2007 with respect to the rejection(s) of claim(s) 1-21 under 102(e) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Cloutier et al (Cloutier), U.S. Patent Pub. No. 2003/0095642.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 21 is rejected under 35 U.S.C. 102(e) as being anticipated by Cloutier.

Regarding claim 21, Cloutier discloses a method comprising receiving a message notification into a cellular wireless communication device (WCD) via a cellular wireless interface (0021), passing the message-notification from the WCD to a locally connected computer and in response to the message-notification, sending the a message retrieval request from the computer to a message server over a

communication path that does not include the cellular wireless interface (i.e., internet path) (0033 and 0034).

Allowable Subject Matter

4. Claims 1-20 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter: Prior art fails to suggest or render obvious message notification and retrieval as described.
